INSTRUCTIONS

For 1 Player

Uses Joystick Controller

©1982 COMMAVID, INC.
The immense WAYPOINT interstellar trade depot floats with its small crew at a distant cross roads between the stars. It should be a quiet place to command. But beware — a dormant colony of giant, alien, mineral-eating termites hidden in ore holding section seven have awakened! The Termites invade the main power-conversion chamber and begin assembling a haphazard nest. Your crew is working feverishly, opening crates of tiny remote-controlled planetary-probe ships. Its up to you to pilot a fragile probe ship into the power chamber and clear out the invaders before they jam it totally. By docking with your refueling ship when necessary, and by energizing the nest blocks so your probe ship's fire can destroy them, you may be able to prevail against the invaders and save WAYPOINT.
GETTING STARTED

- Turn off your game console.
- Insert the COSMIC SWARM cartridge.
- Make sure the left joystick controller is firmly connected to the console (this is the only controller used).
- Turn on your game console.
- Select the game skill level by setting the console difficulty switches (Note: On Sears Tele-Game™, the difficulty switches are called skill switches. The “a” position is called expert, and the “b” position is called novice).

**Beginner:** Set both difficulty switches to “b”.

**Novice:** Set left difficulty switch to “a”, set right difficulty switch to “b”.

**Challenger:** Set left difficulty switch to “b”, set right difficulty switch to “a”.

**Expert:** Set both difficulty switches to “a”.

- Hold the joystick with the red button in the upper left.
- Start the game by pressing the game reset switch.
CONTROLLING YOUR SHIP

Use the left joystick controller to control your probe ship.

RED BUTTON UP

When the red button is up, pushing the joystick will move the probe ship horizontally, vertically, or diagonally.

RED BUTTON DOWN

When the red button is down, pushing on the joystick will move the probe ship vertically, rotate the direction of the ship, or do both at the same time. The probe ship's gun will fire when the red button is released. If a new bolt is fired while an old one is in flight, the old one is destroyed. Only one bolt can be in flight at a time.
GAME PLAY

If your probe ship touches a Termite or any of the nest blocks they lay down, it will be instantly destroyed. Termites can be destroyed by hitting them with a bolt from your ship. Nest blocks will stop your ship’s bolts without being destroyed unless they are energized (described later).

The game begins with a reserve force of 3 probe ships displayed at the top of the screen to the right of the score. A new ship is earned for every 100 points scored. Up to six ships can be held in reserve. When the last probe ship is destroyed, the game ends.

You must occasionally refuel your ship. A warning sound will alert you when your fuel is low. A refueling ship will then slowly travel down and back up the left or right edge of the screen. The game ends if you fail to dock with the refueling ship before it returns to the top of the screen — regardless of how many ships you have in reserve.
If a termite is carrying a block, and it is hit squarely on the bottom of the block, both the termite and its block are destroyed. The remaining blocks then turn from green to red (or become a darker grey on a black-and-white TV). The blocks are now "energized" and are vulnerable to destruction by your bolts.

Whenever your bolts destroy a termite, unless you hit the termite on the bottom of a block it is carrying, all blocks are de-energized and become impossible to destroy. In this state they are green (lighter grey on a black-and-white set).
SCORING

Hitting a termite that is **not** carrying a block 1 point
Hitting a termite that is carrying a block
  if the bottom of the block is **not** hit 2 points
  if the bottom of the block is hit 3 points
Hitting an energized (red) block 1 point

By scoring properly, an observant and skillful player can earn bonus points 100 or 200 at a time. These bonus points do not, however, count toward earning extra probe ships.

DIFFICULTY SWITCHES

The left difficulty switch controls the speed of one of the termites; the "a" position is the fastest. The right difficulty switch controls the aggressiveness of the termites. In the "a" position they are much more likely to chase your ship after dropping their blocks.
CommaVid is a different kind of game company, formed by a group of professionals from computing and the physical sciences. We believe that our experience outside the consumer electronic market will aid us in developing interesting products for our customers. New electronic products are like presents, sometimes it's nice to get what you want and other times a surprise is welcome. By combining our own ideas, and reactions of our customers, we hope to create some pleasantly surprising new products. To help us do this we would like both your reactions to this game and any suggestions you would care to pass along for new games or other new computer based consumer products. We will read everything you send to the address below and answer as often as we can. Unless you request otherwise, we will include you in our list for mailings of advance information about our new releases.

The next time you are shopping for fun and games, remember to look for CommaVid.
